11                              "
12          ] Nonlinear Frame Modeling: 2D RC frame with distributed plasticity (fiber sections) using `nonlinear8e
13          ] Material Laws:
14          - *Concrete*: `Concrete01` with confined (core) and unconfined (cover) properties.
15          - *Steel*: `Hysteretic` model with pinching, hardening, and cyclic degradation.
16          ] Seismic Loads:
17          - Pushover: Displacement-controlled lateral loading to failure.
18          - Dynamic: Uniform excitation with user-defined ground motions (X/Y components).
19          ] Damping: Rayleigh damping (a0, a1) calibrated via eigenvalue analysis (modes 1-2).
20          ] Performance Metrics:
21          - Ductility Ratio ( $\mu$ ): Derived from bilinearized pushover curves.
22          - Overstrength ( $\alpha_o$ ): Yield vs. ultimate capacity.
23          - Damage Index (DI): Normalized displacement demand/capacity.
24          ] Advanced Solver: HHT-a integrator (unconditionally stable) with Newton-Raphson iterations.
25          ] Outputs:
26          - Hysteretic responses (P-M, V-Δ, M-θ).
27          - Time-history plots (displacement, base shear).
28          - Stiffness degradation tracking.
29          ] Validation: Logarithmic decrement method for damping ratio verification.
30          ] Ductility Damage Index (DDI) Implementation:
31          DDI quantifies structural damage via normalized displacement demand.
32          # After bilinear fit (X[1] = Δy, X[2] = Δu):
33          Dd = max(abs(DISP_Xd)) # Max dynamic displacement demand
34          DI = (Dd - Dy) / (Du - Dy) # Ductility Damage Index (X-dir)
