2  #           >> IN THE NAME OF ALLAH, THE MOST GRACIOUS, THE MOST MERCIFUL <<
3  #   CONSTRAINED OPTIMIZATION OF REINFORCED CONCRETE COLUMN DESIGN USING NONLINEAR PUSHOVER
4  #   ANALYSIS IN OPENSEES
5  #
6  #   FIND BEST COLUMN REBAR DIAMETER AND COLUMN SECTION DEPTH WITH TARGET STRUCTURAL DUCTILITY RATIO
7  #
8  #           THIS PROGRAM WRITTEN BY SALAR DELAVAR GHASHGHAEI (QASHQAI)
9  #           EMAIL: salar.d.ghashghaei@gmail.com
10 #####
11 """
12 # 1. Import OpenSeesPy, NumPy, SciPy, and custom analysis modules
13 #   Used for nonlinear FEM analysis, optimization, and post-processing
14
15 # 2. Define concrete and steel material properties
16 #   Includes confined/unconfined concrete and nonlinear reinforcing steel
17
18 # 3. Define column and beam geometry (section sizes, cover, rebar diameter)
19 #   These parameters control stiffness, strength, and ductility
20
21 # 4. Define pushover analysis parameters
22 #   Maximum displacement, increment size, element lengths, and solver settings
23
24 # 5. Define PUSHOVER_ANALYSIS() function
25 #   Builds a 2D RC frame model, applies loads, and performs nonlinear pushover
26
27 # 6. Inside PUSHOVER_ANALYSIS():
28 #   - Create nodes, boundary conditions, sections, and elements
29 #   - Apply displacement-controlled static analysis
30 #   - Record forces, displacements, rotations, and stiffness values
31
32 # 7. Fit a bilinear curve to base-shear vs displacement
33 #   Used to compute ductility ratio ( $\mu$ ) and over-strength factor ( $\Omega_0$ )
34
35 # 8. Return structural response data including  $\mu$  and  $\Omega_0$ 
36 #   These are the key performance indicators for optimization
